

Task 1

Name : Sorn Sreylin 20231441
Phal Chhengnor 20231053
Khorn Sonita 20231170

1. Between SGA AND PGA

SGA (System Global Area)	PGA (Program Global Area)
- Shared by all users and processes - Stores shared data and control information - Created when the Oracle instance starts - Includes Database Buffer Cache, Shared Pool, Redo Log Buffer, etc. - Helps multiple users access the database efficiently	- Private to each server process - Stores data and control information for a single process - Created when a user process/server process starts - Includes Sort Area, Session Information, Stack Space, etc. - Helps an individual process perform operations efficiently

2. Between DBWn and LGWR

DBWn (Database Writer)	LGWR (Log Writer)
- Writes modified data blocks from the Database Buffer Cache to data files - Handles actual database data - Writes data periodically when needed - Improves database performance by freeing buffer cache space	- Writes redo entries from the Redo Log Buffer to online redo log files - Handles recovery information (redo logs) - Writes redo records frequently, especially at COMMIT - Ensures transaction durability and recoverability
